SKILLS

React (JS & TS)		Next (JS &TS)		Vue (JS & TS)
Node js		LoopBack		SQL

EXPERIENCE

NETWORK COURIER

- Created UI components and integrated APIs to develop functionalities for an enterprise application serving a leading courier service provider with a global network in Singapore.

- Collaborated with a team of 15+ developers to build an interactive and dynamic web app using **Vue.js**, ensuring maximum user experience and seamless performance.

HOSPITAL MANAGEMENT SYSTEM (HMS)

- Adopted **React with TypeScript** to develop a highly responsive and interactive interface, elevating user experiences on all devices. TypeScript added reliability and maintainability, enriching the development lifecycle.
- **LoopBack** for backend operations, praised for its superior data management and effortless REST API controller creation. This facilitated seamless handling of substantial user data and traffic.
- Utilized **Digital Ocean droplets** for backend deployment, providing a cost-effective, reliable hosting environment.

AUDE . AI - (AI - POWERED TECHNOLOGY)

- **Aude.ai** is an AI-driven platform that helps organizations track, analyze, and enhance team performance by integrating **goal management, real-time insights, and automated reporting**. It leverages AI to extract key metrics from Slack, Microsoft Teams, and other data sources.

- Developed and maintained a **Node.js REST API** with **RAG-based** AI retrieval, integrating MongoDB Atlas, ChromaDB, LangChain, Redis, and Bull queues for efficient data processing. Built and optimized a **Next.js UI** with dynamic dashboards, team performance tracking, and **Slack/MS** Teams integration to enhance decision-making.

CUSTOMER ONLINE BOOKING

- The application will leverage various features to streamline parcel ordering and delivery tracking. It includes a robust tracking system enabling users to monitor their order status at any time. Accessible on desktop and mobile devices, the application facilitates convenient parcel ordering from anywhere.

- Powered by a **Node.js** and **Express.js** backend, the system manages order data and tracks delivery statuses. **Vue.js** is utilized for frontend development, ensuring a responsive and engaging user interface across all devices.

YELLOW SUMMER

- Engineered the digital face of Yellow Summer Software Training Institute, merging code and creativity to construct an interactive and informative website using React with TypeScript.

- Transformed concepts into code as a software developer for Yellow Summer Software Training Institute, facilitating a seamless online learning journey through an elegantly designed interface powered by React and TypeScript.

- Designed and coded the virtual gateway to Yellow Summer Software Training Institute, underscoring my proficiency as a software developer and dedication to enhancing educational accessibility with **React** and **TypeScript**.
